EXPERIMENT 11: IMPLEMENTATION OF SLIDING WINDOW PROTOCOL USING C

PROGRAM :

```
#include <stdio.h>

int main(void) {
    int total, window, base = 0, i, end;
    printf("Enter total number of frames: ");
    if (scanf("%d", &total) != 1) return 1;
    printf("Enter window size: ");
    if (scanf("%d", &window) != 1) return 1;

    if (total <= 0 || window <= 0) {
        printf("Enter positive values only.\n");
        return 1;
    }
    printf("\nSliding Window Protocol Simulation\n");
    while (base < total) {
        end = base + window;
        if (end > total)
            end = total;
        printf("\nSender window: frames %d to %d\n",
               base, end - 1);
        for (i = base; i < end; i++)
            printf("Sender: Sending frame %d\n", i);
        for (i = base; i < end; i++) {
```

```
            printf("Receiver: Frame %d received\n", i);
            printf("Receiver: ACK %d sent\n", i);
        }
        base = end;
        printf("Sender: Window moved forward\n");
    }
    printf("\nAll frames sent and acknowledged.\n");
    return 0;
}
```

OUTPUT :
